

EDUCATION

California State University, Long Beach

Aug 2021 - May 2024

B.S. Computer Science

GPA: 4.0

- Organizations: Association for Computing Machinery (ACM), Google Developer Student Clubs (GDSC), BeachHacks
- Honors and Scholarships: Summa Cum Laude, Stem Advantage Scholar, President's List (6x)

SKILLS

Languages: Python, Java, Javascript, TypeScript, SQL

Technologies: React, AWS, PyTorch, Redux, JUnit, Mockito, JEST, PyTest

EXPERIENCE

Amazon

Denver, CO

Software Development Engineer II

July 2026 - Present

- Hardening the data center CV system for operational reliability at scale and expanding coverage to new regions and customer teams
- Building self-service model onboarding, enabling non-technical customers to train and deploy directly on existing infrastructure
- Designed a centralized image labeling system enabling concurrent multi-user annotation, replacing a single-user, EC2-dependent workflow prone to dataset staleness
- Architected a greenfield micro-frontend platform, cutting UI deployment for data center customer teams from weeks of multi-team coordination to under a day

Software Development Engineer I

July 2024 - July 2026

- Designed and built an end-to-end computer-vision system with a REST API, providing centralized vision-as-a-service for data center operations
- Directly enabled a \$200MM annualized revenue recovery for one operations team, and drove a 75% reduction in human labor while improving auditability for another, using ResNet50 models served via TorchServe on SageMaker
- Partnered with data center operations and security leadership to reverse a decade-long no-camera policy, unlocking the image-based verification the CV system depends on
- Redesigned a critical electrical system monitoring page using GraphQL and Redis, cutting load time 83% and codebase size 66% while extending availability to on-prem systems
- Streamlined data center commissioning for controls engineering customers with new GraphQL and Redis-backed inventory pages, cutting workflow time over 80%

Amazon

Seattle, WA

Software Development Engineer Intern

May 2023 - Aug 2023

- Redesigned AWS Connect onboarding APIs to implement idempotency and increase fault tolerance
- Engineered supporting infrastructure using Java, AWS DynamoDB, and AWS API Gateway
- Improved API retry latency by over 50% through backend and infrastructure changes
- Developed and pitched design documentation, including high-level architecture and low-level design
- Created rigorous unit, integration, and system-level tests to ensure quality and fault tolerance

California State University Long Beach College of Engineering

Long Beach, CA

Instructional Assistant

Jan 2023 - Jan 2024

- Assisted the primary professor with an algorithms course with over 80 students
- Developed auto-grading tools to analyze student algorithms, reducing grading time by over 75%
- Hosted office hours and supported assignment creation to help students engage with course material

714Heat

Remote

Founder

Nov 2017 - Dec 2024

- Facilitated over \$1MM in total sales via in-store promotions and social media marketing
- Managed a 100+ member reselling community and brick-and-mortar consignment store, sourcing and pricing inventory of shoes and high-end apparel based on market analysis
